NSA is asked to provide assistance for the set up and dismantling of all advertising material on site one to two days before and after the event. All information required will be communicated by FIS M+M Implementation Manager in due time before the season starts.

Advertising possibilities on the video wall are allocated as follows:

3.7 Finish Coral

Finish Coral setup

The design and set up of the finish Coral represents the high quality and expectations of a World Cup event. It is important for the athletes and TV images that the exit gates are situated in the opposite corner to the Video and Timing screens. The side of the exit should be determined by the practicality of the LED wall installation and athlete access to mixed zones and lift or skidoo access. This provides the best view for the Athletes to check their re-run and highlights, thus providing the best possible images for Sponsors. It should be avoided where possible that the exit and video wall are positioned on the same side. A tidy clean coral set with 90-degree corners provides the best TV images. Ideally, the exit gate should be determined and set by the FIS M+M Implementation team in accordance with safety measures set by the Race director and TD before the set-up of the coral begins. It should be noted that there are several options regarding the final set-up of the exit area, please contact the FIS M+M implementation team regarding any relevant issues or questions.

- 75% NSA

Requirements NSA
