General

This document provides the definition of the XML protocol used for the FIS Data Exchange for start lists, intermediate results and results.

Version 1 and versions 2.x of XML description are still valid but will be deprecated and exists separated from version 3.

Encoding of the XML result file should be in UTF8. A DTD definition must not be used.

If optional elements are used (not empty) they should at least contain the required child elements. Foreign XML elements can be used and will be ignored from the FIS system.

Language for the content is English and characters for data content should be only Latin letters.

Please note that the examples in this document do not need be correct in terms of data but should only show the XML structure. The structure of the XML file and its content will be processed and verified by FIS and a confirmation email will be sent out to the sender of the file containing the result of processing.

XML result transmission

Results XML files must be sent by email to results@fisski.com (alpineresults@fisski.com is also valid).

The subject of the email should contain for easy email identification the NSA code and race codex.

Example email subject: AUT1234

File name of the xml files: <NSA code><race codex (4 digits)>.xml

Example XML file name: AUT1234.xml

Result XML files can be sent as one file or also more than one file within one email. Files can be also sent packed as ZIP file. The ZIP file must only contain the XML result file(s) but no folders or hidden system files and must not be password protected.

Support

For support requests, questions and feedbacks please contact the FIS IT department: it@fisski.com.

A support request for a certain race should at least contain the FIS race codex and a short description of the issue. Preferred support language is English.
